

Monoclonal antibody is produced by immunizing animals with a synthetic peptide corresponding to Source / Purification residues surrounding Gln483 of human synapsin-1 protein.

- This Cell Signaling Technology antibody is conjugated to Alexa Fluor[®] 647 fluorescent dye and tested in-**Product Description** house for direct immunofluorescent analysis in mouse and rat tissues. The antibody is expected to exhibit the same species cross-reactivity as the unconjugated Synapsin-1 (D12G5) XP[®] Rabbit mAb #5297.
- Synapsins, a group of at least five related members (synapsins Ia, Ib, IIa, IIb, and IIIa), are abundant brain Background proteins essential for regulating neurotransmitter release (1,2). All synapsins contain a short aminoterminal domain that is highly conserved and phosphorylated by PKA or CaM kinase I (1). Phosphorylation of the synapsin amino-terminal domain at Ser9 inhibits its binding to phospholipids and dissociates synapsins from synaptic vesicles (2).

- **Species Reactivity** Species reactivity is determined by testing in at least one approved application (e.g., western blot).
- **Applications Key** IF-F: Immunofluorescence (Frozen) H: human M: mouse R: rat Hm: hamster Mk: monkey Vir: virus Mi: mink C: chicken Dm: D. melanogaster **Cross-Reactivity Key** X: Xenopus Z: zebrafish B: bovine Dg: dog Pg: pig Sc: S. cerevisiae Ce: C. elegans Hr: horse GP: Guinea Pig Rab: rabbit All: all species expected Trademarks and Cell Signaling Technology is a trademark of Cell Signaling Technology, Inc.
