SoftGenetics
*Software **PowerTools** for Genetic Analysis*

28 October 2019

We are pleased to enclose the GeneMarker®HTS software, version 2.2.0 update. The program includes new features requested by forensic laboratories, including:

- Improved STR viewer that includes all histograms and tables in one screen
- Improved STR/CE allele concordance
- Reimplementation of earlier option for mtDNA amplicon sorting
- Addition of motif region (green lines) to the mtDNA viewer

A detailed list of the new features with risk evaluation can be reviewed in the change log enclosed with this letter. A pdf of the change log is also located on the installation disk.

As always, we appreciate comments and suggestions. If you have any additional suggestions, please let us know.

Please contact me if you would like to arrange a web training session to review these new features.

Thank you for using GeneMarkerHTS software,

Teresa Snyder-Leiby
Director of Marketing and Product Development
